- Co-extruded permanent color stripes - minimum of 3, equally spaced.
- Co-extruded permanent color jacket - full external color appearance.
- Completely colored wall - external and internal color appearance.

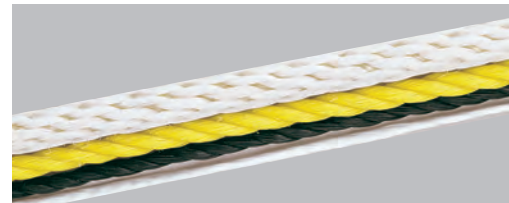

EVEN-LOAD™

A-D Technologies is recognized for its field solutions to everyday problems. Such was the case with EVEN-LOAD™. This unique process provides easy access to the pull line regardless of how many runs are originated. By placing extra pull line footage evenly in the conduit during the manufacturing process, the EVEN-LOAD™ Slack Process ensures slack in the rope or tape at any access point throughout the duct reel.

TAPE

1800 lb. Polyester Tape
1250 lb. Polyester Tape
1800 lb. Aramid
DETECTABLE TAPE*

ROPE

1800 lb. Slickline Rope
1/4" Poly Rope 1250 lb.
200 lb. Poly Pull String

*Detectable Tape Option

Most tapes can also be equipped with a jacketed 24 gauge wire to provide a proven, reliable means of cable or duct locating. DETECTABLE TAPE offers the same high performance as regular tape and uses a corrosion resistant conductor. Compatible with standard transmitter/receiving equipment.

NOTE: A-D Technologies has made every attempt to assure that the information contained in this product bulletin is accurate. The information supplied may change without notice. This information is intended to inform the reader of the typical characteristics of the pipe and accessories that are described and should not be considered complete with regard to design considerations.
